Piloting the AutoKinex® Connected Vehicle Program

Powerful Benefits at No Cost

The **AutoKinex® for Agencies Connected Vehicle Program** is about future-proofing your agency today with connected vehicle data to stop revenue leakage in its tracks, substantiate HOV occupancy for increased compliance and reduced enforcement costs, and reduce manual reviews.

AutoKinex delivers a powerful combination of operational, financial, and strategic benefits. Our Connected Vehicle Program enhances existing tolling systems by integrating connected vehicle data. By reconciling data sources prior to manual review, AutoKinex turns low-confidence reads into high-confidence transactions to significantly improve accuracy and match transponder performance.

The program delivers operational, financial, and strategic benefits while being provided at no cost to participating agencies.

Let's Run the No-Cost Connected Vehicle Pilot

The AutoKinex Connected Vehicle program is designed to be simple, low risk, and actionable. Both the pilot and the program are provided at no cost and are intentionally structured for minimal agency effort, allowing value validation without disrupting existing operations.

Because no infrastructure or specialized hardware is required, there's no upfront capital investment or installation time, and agencies can conduct network-wide pilots across their entire system. Your agency can measure tangible improvements in match rates, operational efficiency, and cost reduction, using your own data and real-world conditions.

The pilot provides a controlled environment to validate integration approaches and build confidence ahead of broader deployment. Explore how AutoKinex can support tolling operations and new revenue opportunities while positioning your agency for the continued evolution of Connected Vehicle technology.

Simple for Agencies

- **NO COST** to Participate
- **EXISTING WORKFLOWS** remain largely unchanged
- **NO NEW INFRASTRUCTURE** required
- **MINIMAL AGENCY** time and resources required

What Happens Next?

AutoKinex provides the data, expertise, and support required to execute and evaluate a successful pilot. Your agency participates in light coordination during configuration and performance reviews. AutoKinex provides access to relevant toll transaction data, typically via API or secure file exchange; we'll work with you to identify the optimal integration point.

There is no need to install new roadside infrastructure or significantly modify workflows. AutoKinex integrates seamlessly into current operations with minimal disruption; your participation is achieved without diverting meaningful time or internal resources. Program metrics will quantify the value of AutoKinex so that your agency can make informed, evidence-based decisions.

1 Share Data

Agency Actions

- No financial commitment. Pilot and program are provided at no cost to agency
- No technical lift or impact
- Agency receives AutoKinex connected vehicle transactions to compare with agency transactions, proving out 100% match

2 Configure the Pilot

Joint Activity

- AutoKinex and agency teams align on the best integration approach
- Pilot setup and validation
- Minimal agency involvement

3 Validate Transactions

AutoKinex Actions

- Creates a technical path to combine connected vehicle data with transponder and license plate reads
- Validates transactions upstream of manual review
- Reduces manual review workload and costs

Validation Occurs Before Manual Review

4 Review Results

Agency Review

- Measurement match rate improvements
- Manual review reduction
- Revenue assurance insights
- Pilot performance report

With the AutoKinex for Agencies Connected Vehicle Program, you'll position your agency at the forefront of connected vehicle tolling and its reduced costs, increased customer satisfaction, and new revenue opportunities.

Take the next step with Verra Mobility and AutoKinex.

Start your AutoKinex Connected Vehicle Program pilot and see how connected vehicle data can improve transaction accuracy, strengthen revenue assurance, and reduce operational costs.
